BLK Scan Cart

FAST, STABLE AND SAFE

BLK Scan Cart is a system mounted on a three-wheel trolley that allows you to move freely on the ground, inside industrial buildings, cycle paths and sidewalks.

The extendable carbon pole can bring the BLK to a height of 3.95 meters above the ground and can be easily levelled by three adjustable legs of carbon tripod.

The trolley is equipped with a parking brake and a ballast bag to increase its stability during stops for scans. The entire system can be folded and disassembled to ensure easy transportation.

Composed of:

- trolley
- extendable carbon pole
- carbon tripod
- ballast bag (6 kg of gravel or sand not included)
- carry bags

Benefits:

- Fast and easy moves between the scans
- Scans at about 4 meters high
- Significant increase in the measurement range
- Greater precision and density of the point cloud

To be used with:

BLK360 G1

BLK360 G2

BLK2GO
